

PETER LEWIS PAINTS INTERIOR DISTEMPER

Made from the finest natural plant & raw materials with no acrylic used for a authentic traditional distemper which gives a very flat finish with subtle variations of colour .PLP distemper is used for restoration works here in Australia & overseas for heritage work as the distemper allows the walls to breathe

PREPARATION

All walls should be clean, dry with no dirt, grease, oil or mould & no loose or friable material

If applying on surfaces that have been repaired we recommend kookaburra lime proof undercoat as it has great tooth & evens porosity of the surface ,spot prime all joints then apply by brush, roller or spray 2 coats of lime proof undercoat .Allow 2 hours to dry before applying top coat

APPLICATION

Mix thoroughly before use & check colour. Apply 2 coats by distemper brush using a crows feet painting technique making sure you don't stick to one direction as the result needs to be random for best results, care must always be taken to keep a wet edge when applying from an edge or corner always plan your stopping point to be a corner or edge Touch dry in 1hr .allow 12hrs between coats & fully cured in 48hrs depending on atmospheric conditions

LOCATION

Interior

COVERAGE

10sq metres per litre

CLEAN UP

Water

STORAGE

Store safely on pallet in temp 5 to 30 degrees do not allow to freeze

WARRANTY

The guarantee we offer with this product is stated on PLP website

SAFTY DIRECTIONS

Keep out of reach of children.Avoid swallowing.Avoid eye contact Provide adequate ventilation.avoid prolonged skin contact. If accidental contact occurs, rinse immediately with water
